LIMS

LOG ACCOUNTING AND CONTRACT MANAGEMENT

Widely Used Log Accounting and Contracting System

The Log Inventory & Management System (LIMS) provides management control over all phases of timberland, woodland, yard and mill operations. It combines the features of a log or timber accounting system with features for silviculture, harvesting, contractor payables, wood or fiber procurement, wood trading or sales, yard or mill inventory, consumption, and comprehensive reporting and planning. LIMS can be implemented to include WeighWiz, LabWiz and ScaleWiz.

WeighWiz records information and captures readings from weigh scale equipment whether a scale site is attended or unattended. WeighWiz can operate on a single scale platform functioning as both the weigh-in and weigh-out scale. It can also control dedicated weigh-in and weigh-out scales.

LabWiz is designed to reduce user training time and ensure a high-level of data integrity. LabWiz has a user-friendly graphic interface and can be configured to define a few or many test metrics. Results from the full range of testing procedures can be captured, processed and exported electronically, eliminating manual data entry. The data validation logic built into the program flags errors for operators to quickly correct.

ScaleWiz is a mobile log yard application used to scale logs for volume and quality attributes used for payment.

LIMS and Connected Forest Xchange (CFX) Integration

With direct integration between LIMS and CFX key operational data, such as electronic tickets, fiber source GPS coordinates, and detailed supply chain records, are viewable in real-time.

The CFX platform includes cloud-based dashboards and mobile ticketing applications seamlessly interfacing to provide real-time visibility to electronic load tickets from harvesters, haulers, and scaling sites. CFX speeds revenue collection, ticket reconciliation and payment processing through electronically reconciled and validated records, providing visibility and timber security for load-related activity throughout the supply chain. The CFX customizable dashboards ensure that load data is visible in real-time for managers throughout the supply chain, helping to create greater efficiency and provide insight into the business activity in real-time.

Key Features

- ▶ Dashboard views of key financial metrics
- ▶ Contract management and ticket reconciliation made easy
- ▶ Fast settlement processing
- ▶ Load validation and timber security
- ▶ Configurable Flexible Reporting
- ▶ Supply chain visibility
