

# CONNECTED FOREST™ CFX (Connected Forest Xchange)

## VISIBILITY AND TIMBER SECURITY IN REAL-TIME

### INCLUDES PAPERLESS LOAD TICKETING OPTION

Trimble Forestry's mobile ticketing and collaborative cloud solutions have been integrated in CFX. In addition, there is the option to deploy paperless Trip Tickets from logging sites to destination mills using the CFX platform.

#### FIBER SUPPLY DATA VISIBILITY

CFX provides contractors with the ability to access log load and piece scale information for all scale site deliveries by mobile phone, tablet or web browser.

Contractor field workers and office administration have real-time access to details such as crew productivity, hauling/cycle times, deliveries and overweights.

CFX provides operational supply chain visibility and cloud-based data collection for streamlining administration and financial tasks.

#### AUDIT CONTRACTOR PAYMENTS

CFX views can be easily setup to audit and reconcile payments from customers for all loads delivered.

#### TIMBER SECURITY

Easily track load trip tickets that do not have a matching weight scale record to monitor and prevent timber security breaches.

#### DATA IMPORT & EXPORT

Easy import and export of all load data formats necessary for log accounting, contractor settlements, and access to datasets in real-time from any internet-connected device.

#### MOBILE TRIP TICKETS

Integrated mobile trip ticketing provides loader operators and truck drivers with easy to use mobile applications to capture and upload key trip ticket data (with the option of paperless or paper ticketing) to CFX, improve safety and simplify scale site receiving and departure steps for drivers.

#### ANALYSIS & REPORTING

CFX has full function data grids and pivot query tools allowing users to save defined layouts for personal or company-wide use. The dashboard highlights key performance indicators, provides extensive charts for visualization, and facilitates analysis of historical and real-time industry data.

#### INDUSTRY COLLABORATION

Industry access to secure, real-time supply chain data introduces many opportunities for the forest industry. Data is at the core of operational decision making. Sawmills, pulpmills, forest companies and contractors can now integrate with their partners to manage daily load transactions and forecast activities for efficiency.
