

CONNECTED FOREST®

LIMS SE & LIMS PRO

Log Inventory & Management System

Trimble Forestry's new cloud version of its Log Inventory & Management System, LIMS, enables small and medium sized forest product companies to realize productivity and growth gains that only larger companies have historically been able to afford. LIMS in the cloud is powerful business management software that streamlines contract, receiving, inventory and settlement processes into a single platform and provides you a complete picture of your operations. LIMS in the Cloud is hosted by Trimble so all you need is a subscription and an internet connection to start improving your business.

Key Features

- Contract Management
- Inventory Management
- Financial Settlements
- Monitoring, Control & Reporting
- B2B Delivery Record Data Exchange
- Mobile Load Tracking
- Mill Receiving

Key Benefits

DIGITIZE YOUR SUPPLY CHAIN DATA

Get better control of your supply chain. Stop dealing with paper tickets, log sheets and manual data entry. Modernize your workflows and increase productivity by spending less time tracking down paper, entering data multiple times and increasing accuracy.

INTEGRATE MOBILE TICKETS WITH YOUR SCALES

Mobile load trip tickets replace hand-written tickets and log sheets in the woods. Data captured via the mobile app syncs to the cloud for same day viewing. Load data can be quickly scanned into the receiving software at the scale via a QR code to reduce wait times and increase accuracy.

SIMPLIFY LOAD RECONCILIATION

Loads recorded at the scale are synced to the settlement system within minutes. Loads can be reconciled on an exception basis rather than reviewing every load. You can import third party loads into the settlement system rather than manually entering every load.

AUTOMATE INVOICING & FINANCIAL SETTLEMENTS

LIMS automatically generates purchase and sales transactions based on contract rates for delivered load tickets. Create invoices and payments to suppliers and customers electronically and generate updates to Accounts Payables & Accounts Receivables for each payment and billing period.

TRACK YARD INVENTORY

Based on inbound and outbound loads, keep track of log inventory in the mill yard by product, species, sort and form. Monitor costs to procure timber inventory and inform mill of available fiber for production planning.

MANAGE KEY PERFORMANCE INDICATORS

Monitor Key Performance Indicators (KPIs) and assess the overall health of your business by viewing rollups of financial data (e.g., total cost, total revenue, average cost, profit margin, etc.). Monitor plan vs. actual and progress of purchase and sales contracts (delivered/remaining). Determine if deliveries to the mill are on track (daily, weekly, monthly). Receive alerts to keep informed about operational issues such as supplier insurance expiration or unpaid loads.

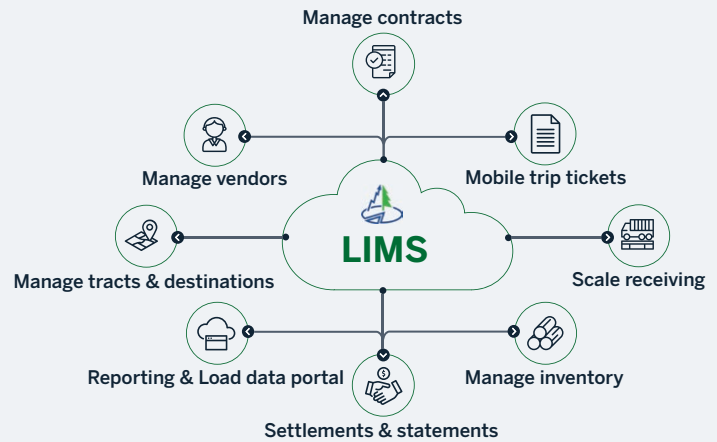

SHARE DATA WITH YOUR PARTNERS

Connected Forest Xchange (CFX) solutions and services enables you to share records of deliveries to your mills with other businesses such as haulers, land owners, and obtain records of deliveries to your customers. Trimble® Forestry CFX enables industry to take advantage of operations monitoring and sharing supply chain data with trading partners with powerful web analytics and API's for system integration and connectivity.

HOSTED SOLUTION IN THE CLOUD

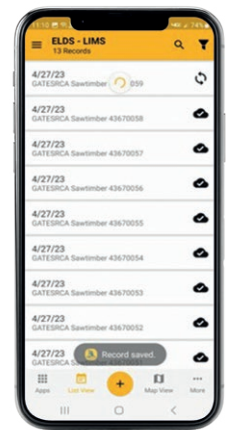

Trimble manages the secure AWS cloud environment that hosts LIMS. This means you don't need I.T. staff to support the solution. We take care of the upgrades, backups and the environment. All you need is a subscription and a login to start using LIMS SE and LIMS PRO.

Cloud Based Log Inventory & Management System
